

Please amend the present application as follows:

**Claims**

The following is a copy of Applicant's claims that identifies language being added with underlining ("\_\_\_") and language being deleted with strikethrough ("—"), as is applicable:

1. (Currently amended) A method performed on an information ~~appliance~~ appliance for printing a document stored on a remote computer, the method comprising:

providing a connection between an information appliance and a remote computer, wherein the remote computer stores one or more documents;

transmitting information regarding a list of documents stored on the information appliance from the information appliance to the remote computer;

receiving synchronization information from the remote computer, the synchronization information comprising one or more references information to one or more documents stored on the remote computer that are available to a user for printing, ~~wherein each reference information identifying a document stored on the remote computer;~~

updating the list of documents stored on the information appliance using the synchronization information received from the remote computer;

displaying the ~~reference information~~ updated list of documents to the user on ~~an information appliance~~ display of the information appliance;

receiving a selection of one or more documents from the displayed ~~reference information~~ list of documents;

receiving a command to print the one or more selected documents; and

responsive to receiving the command to print, transmitting a print request to a nearby printer that instructs the printer to print the one or more selected documents.

2. (Original) The method of Claim 1, wherein the print request is transmitted over a wireless connection between the information appliance and the nearby printer.

3. (Original) The method of Claim 2, wherein the wireless connection conforms to the Bluetooth technology.

4. (Original) The method of Claim 1, wherein the one or more documents are stored in a mailbox, wherein the mailbox is associated with a user.

5. (Original) The method of Claim 1, wherein the print request comprises the mailbox server's identification information.

6. (Original) The method of Claim 1, wherein the print request comprises one or more references identifying the one or more selected documents.

7. (Original) The method of Claim 1, wherein the print request comprises a user identification information.

8. (Original) The method of Claim 1, wherein the remote computer is a mailbox server.

9. (Original) The method of Claim 1, wherein the information appliance is a wireless phone.

10. (Original) The method of Claim 1, wherein the information appliance is a personal digital assistant.

11-14. (Canceled)

15. (Currently amended) A computer-readable storage medium having stored thereon computer instructions that, when executed by an information appliance, cause the information appliance to:

provide a connection between an information appliance and a remote computer, wherein the remote computer stores one or more documents;

transmit information regarding a list of documents stored on the information appliance from the information appliance to the remote computer;

receive synchronization information from the remote computer, the synchronization information comprising one or more references information to one or more documents stored on the remote computer that are available to a user for printing, each reference information identifying a document stored on the remote computer;

update the list of documents stored on the information appliance using the synchronization information received from the remote computer;

display the ~~reference information~~ updated list of documents to a user on an a information-appliance display of the information appliance;

receive a selection of one or more documents from the displayed ~~reference~~  
~~information~~ list of documents;

receive a command to print the one or more selected documents; and

transmit a print request to a nearby printer in response to receiving the  
command to print that instructs the printer to print the one or more selected  
documents.

16. (Original) The computer-readable storage medium of Claim 15,  
wherein the print request comprises user identification information.

17. (Original) The computer-readable storage medium of Claim 15,  
wherein the print request comprises identification information for the remote  
computer.

18-20. (Canceled)

21. (New) The computer-readable storage medium of Claim 15, wherein  
the print request is transmitted over a wireless connection between the information  
appliance and the printer.

22. (New) The computer-readable storage medium of Claim 21, wherein  
the wireless connection conforms to the Bluetooth technology.

23. (New) The computer-readable storage medium of Claim 15, wherein the print request comprises one or more references identifying the one or more selected documents.

24. (New) The computer-readable storage medium of Claim 15, wherein the computer-readable storage medium is provided in a wireless phone.

25. (New) The computer-readable storage medium of Claim 15, wherein the computer-readable storage medium is provided in a personal digital assistant.

26. (New) The method of Claim 1, wherein the information regarding a list of documents stored on the information appliance comprises the list of documents currently stored on the information appliance.

27. (New) The method of Claim 1, wherein the information regarding a list of documents stored on the information appliance comprises a timestamp that indicates a last time the synchronization information was received from the remote computer.

28. (New) The method of Claim 1, wherein the references to documents stored on the remote computer comprise one or more of a Universal Resource Locator (URL), filename, reference number, and an identification number.

29. (New) The method of Claim 1, further comprising transmitting user identification information to the remote computer prior to the information regarding a list of documents stored on the information appliance.

30. (New) The computer-readable storage medium of Claim 15, wherein the information regarding a list of documents stored on the information appliance comprises the list of documents currently stored on the information appliance.

31. (New) The computer-readable storage medium of Claim 15, wherein the information regarding a list of documents stored on the information appliance comprises a timestamp that indicates a last time the synchronization information was received from the remote computer.

32. (New) The computer-readable storage medium of Claim 15, wherein the references to documents stored on the remote computer comprise one or more of a Universal Resource Locator (URL), filename, reference number, and an identification number.

33. (New) The computer-readable storage medium of Claim 15, further comprising computer instructions that, when executed by an information appliance, cause the information appliance to transmit user identification information to the remote computer prior to the information regarding a list of documents stored on the information appliance.
